ASSIGNMENT-1(b) : OPERATORS

1. Accept numbers from a user

In [20]:
```
n1 = int(input('Enter number 1 : '))
n2 =  int(input('Enter number 2 : '))
print('Number 1 : ', n1)
print('Number 2 : ', n2)
```

```
Number 1 :  5
Number 2 :  4
```

2. Display three string "Name", "Is", "James" as "Name** Is **James"

In [21]:
```
print( "Name", "Is", "James", sep='**')
```

```
Name**Is**James
```

3. Convert Decimal number to octal using print() output formatting

In [22]:
```
n = int(input('Enter number : '))
print('Octal equivalent : ', format(n, 'o'))
```

```
Octal equivalent :  10701
```

4. Display float number with 2 decimal places using print()

In [26]:
```
n = float(input('Enter number : '))
print('{:.2f}'.format(n))
```

```
45.27
```

5. Format variables using a string.format() method.

In [27]:
```
name = input('Enter name: ')
age = int(input('Enter age: '))
print("Name: {}, Age: {}".format(name, age))
```

```
Name: Srabani, Age: 19
```

6. Write a python program to swap two variables without using 3rd variable.

In [28]:
```
a = int(input('Enter a : '))
b =  int(input('Enter b : '))
print(f"a = {a}", f"b = {b}", sep='\n')
a,b = b,a
print("After swapping : ", f"a = {a}", f"b = {b}", sep='\n')
```

```
a = 4
b = 9
After swapping :
a = 9
b = 4
```

7. Write a python program to Calculate Sum of 'n' no of Natural Numbers.

In [29]:
```
n = int(input('Enter number : '))
sum = int(n*(n+1)/2)
print(f'Sum of {n} natural numbers is {sum}.')
```

```
Sum of 5 natural numbers is 15.
```

8. Write a python program to design a book structure with the details of book name, Publication, isbnno, author, totalpages, price. Print the details in a formatted way.

In [30]:
```
name = input('Enter book name : ')
pub = input('Enter publication : ')
isbnno = int(input('Enter isbn number : '))
author = input('Enter author name : ')
totalpages = int(input('Enter total number of pages : '))
price = float(input("Enter price : "))
print("Book Details : ", f"Book Name : {name}", f"Publication : {pub}", f"ISBN no. : {isl
```

```
Book Details :
Book Name : Wishing chair
Publication : BPB
ISBN no. : 456845
Author : Enid Blyton
Total Pages : 200
Price : 299.00
```

9. Write a python program to design a employee structure with the details of employee Name, Employee no, date of joining, department name, designation, basic salary. Calculate Da 30% of basic, Hra 15%., tax reduction 5%. Calculate gross and net salary and tenure of Job. Print the details in a Formatted way.

In [31]:
```
from datetime import date
name = input('Enter name : ')
empno = int(input('Enter employee number : '))
doj = int(input('Enter joining year : '))
curyear = date.today().year
tenure = curyear-doj
dept = input('Enter dept name : ')
desgn = input("Enter designation : ")
basic = float(input('Enter basic salary : '))
DA, HRA, tax = 0.3*basic, 0.15*basic, 0.05*basic
gross = basic + DA + HRA
net = gross - tax
print(f"Tenure : {tenure}",f"Gross : {gross}", f"Net : {net}", sep='\n')
```

```
Tenure : 2
Gross : 2900000.0
Net : 2800000.0
```
